

Measurements

Measure your glass panel in multiple spots along the width and height, it likely is not completely square. Use the largest measurements. We cut your frame to fit your glass panel unless notified otherwise. (If you wish for the measurements to be the outside dimension of the frame please let us know.)

Your completed framed project will grow in size based on the frame size you choose.

Double check the edge thickness, sometimes solder can build up and be thicker than the standard 3/16" or 5/16". If you choose the Modified Groove Add-on option, please email us to let us know how you would like the groove modified. nhframes@gmail.com

Find your price

Round up the sizes of the width and height to the next full inch. Add them together, this is your price group.

- Example: Glass panel size is 12 1/2" x 34 3/8"
Round up to 13 + 35 = 48, price group is 43" - 48"
